Installation Variations

A stainless steel shroud may be purchased to protect the waterline between the floor and the Ritchie Stall Fount. Part number 18092 includes two sections of shroud, 19 ³/₄ inches long. This part is not required for the non-electric Stall Fount.

Installing the shroud - After the plumbing connections are made, install the optional shroud using 1/4" lag screws or bolts. When more than one section of shroud is used, the total length of the shroud can be adjusted in 6" increments by removing insulation as needed and moving top shroud down to align next set of holes.

Installation Instructions for Stock Tank Valve Part Number 18141

The Ritchie Stock Tank Valve is designed to fit on either plastic or steel tanks. The single bracket that is included can be orientated one of two ways depending on the tank you are mounting the unit to. The following describes how this bracket should be mounted for either type of tank installation.

1. Place the backing plate on the inside of the blue valve housing. Align all three holes and place the two short bolts through the two bottom holes from the inside out. Ensure that the center hole lines up with the hole on the valve housing, as it provides ventilation to prevent a vacuum from forming in the valve chamber.
2. Mount the angle bracket with the short side of the bracket touching the valve housing for plastic tanks, and long side touching the housing for steel tanks. The angle bracket should be mounted so the bend of the bracket is below the mounting holes, not on top.
3. Align the bolts sticking through the backing plate, housing, and angle bracket. Use the provided flanged nuts to fasten the assembly.
4. To mount the unit to the tank, use the outer and center holes to bolt to the bracket to the tank. For plastic tanks there are a pair of holes on each end and in the center you may use the set of holes closest to the valve housing, or further out on the bracket, whichever fits your tank better. For steel tanks there is only one set of holes. Use the angle bracket itself as a template to mark the three holes.
5. With a 5/16" bit, drill out the three pre-marked holes. NOTE: FOR STEEL TANKS, HOLES MAY HAVE TO BE DRILLED AT AN ANGLE TO GO ALL THE WAY THROUGH THE RIM SO BOLTS MAY BE INSTALLED.
6. Lay the bracket on top of the holes that you just drilled and insert the three 1/4-20 x 2 1/2 hex head bolts. Apply the remaining flange nuts to the bottom of the bolts and tighten.

The drawing at left shows the angle bracket oriented for use with plastic tanks. For use on steel tanks, orient as below:
